

# Welcome to manjaro i3!

The default mod-key is **<Super>** (Windows-key).  
Look&Feel can be changed with **Lxappearance**.  
For wallpaper selection use **Nitrogen**.

**Audio:** The default is **Alsa** with **Volumeicon**. If you'd like to use **Pulseaudio** (plus 32MB) please run "install\_pulse" in a terminal to install all necessary packages and have your config adjusted automatically.  
This can be reverted by running "rm\_pulse".

## Most important shortcuts

open new terminal window - **mod+<Enter>**  
kill focused container - **mod+<Shift>+q**  
open dmenu - **mod+d**  
categorized menu 'morc\_menu' - **mod+z**

tile vertically - **mod+v**  
tile horizontally - **mod+h**  
toggle split direction - **mod+q**  
toggle floating - **mod+<Shift>+Space**  
toggle fullscreen - **mod+f**  
toggle sticky - **mod+<Shift>+s**  
hide/show i3status-bar - **mod+m**

## Application Shortcuts

Bmenu (CLI configuration tool) - **mod+Ctrl+b**  
Webbrowser Palemoon - **mod+F2**  
Filemanager Pcmnfm - **mod+F3**  
Root Filemanager - **mod+<Shift>+F3**  
Alsamixer (or Pavucontrol if you have upgraded to Pulseaudio) - **mod+<Ctrl>+m**  
Musicplayer moc - **mod+F5**  
Screenshot of whole screen - **<Print>**  
Screenshot of focused container - **mod+<Print>**  
Screenshot of selection - **mod+<Shift>+<Print>**  
Switch off transparency (kill Compton) - **mod+t**  
Switch transparency back on - **mod+<Ctrl>+t**  
restart Dunst - **mod+<Shift>+d**  
xkill - **mod+<Ctrl>+x**

## Navigation

change focus - **mod+arrowkeys** or **mod+j,k,l,ö**  
change focus between tiling / floating windows - **mod+space**  
move focused container - **mod+<Shift>+arrowkeys** or **mod+<Shift>+j,k,l,ö**  
move floating window with the mouse - hold down **mod**

switch to workspace number 1-8 - **mod+1-8**  
navigate between workspaces - **mod+<Ctrl>+<Right>/<Left>**  
send focused container to workspace number 1-8 - **mod+<Ctrl>+1-8**  
move to workspace 1-8 with focused container - **mod+<Shift>+1-8**  
workspace back-and-forth - **mod+b**  
move container to workspace back-and-forth - **mod+<Shift>+b**  
resize container - **mod+r** followed by arrowkeys or j,k,l,ö (or **mod+<right-click>**)  
(exit resize mode with **<Enter>** or **<Esc>**)  
resize gaps - **mod+<Shift>+g** followed by **o** (outer gaps) / **i** (inner gaps) and **+** / **-** / **0**  
(exit gaps mode with **<Enter>** or **<Esc>**)  
move focused container to scratchpad - **mod+<Shift>+-**  
show (next) scratchpad window - **mod+-**

### Change desktop behaviour

stacking - **mod+s**  
tabbed - **mod+w**  
tiling / toggle split - **mod+e**

### Change window borders

none - **mod+u**  
2 pixels - **mod+y**  
normal - **mod+n**

reload the configuration file - **mod+<Shift>+c**  
restart i3 in-place - **mod+<Shift>+r** (preserves and reloads your session)

lock screen - **mod+9**  
exit session - **mod+0** and select:  
(l)ock, (e)xit, (s)uspend, switch\_(u)ser, (h)ibernate, (r)eboot, (<Shift>+S)hutdown  
(cancel with **<Enter>** or **<Esc>**)  
or  
exit i3 - **mod+<Shift>+e** (logs you out of your Xsession)

**!! All i3 settings, can be edited in ~/.i3/config !!**

### These custom bash aliases (terminal shortcuts) have been included:

- alias **fixit**='sudo rm -f /var/lib/pacman/db.lck'
- alias **update**='yaourt -Syua'
- alias **con**='nano ~/.i3/config'
- alias **comp**='nano .config/compton.conf'
- alias **inst**='sudo pacman -S'
- alias **mirrors**='sudo pacman-mirrors -g'
- alias **printer**='system-config-printer'
- alias **la**='ls -la --group-directories-first --time-style=+"%d.%m.%Y %H:%M" --color=auto -F'
- alias **ll**='ls -l --group-directories-first --time-style=+"%d.%m.%Y %H:%M" --color=auto -F'

**HAVE FUN ! 8^}**
