

Welcome to manjaro i3!

For the graphical installer press **mod+i**, or open dmenu (**mod+d**) and type **gksu calamares** or for the CLI-installer run **sudo setup** in a terminal window (**mod+Enter**).
The default mod-key is **<Super>** (Windows-key).
Look&Feel can be changed with **Lxappearance**.
For wallpaper selection use **Nitrogen**.

Audio: The default is **Alsa** with **Volumeicon**. If you'd like to use **Pulseaudio** (plus 32MB) please run "**install_pulse**" in a terminal to install all necessary packages and have your config adjusted automatically.
This can be reverted by running "**rm_pulse**".

Most important shortcuts

open new terminal window - **mod+<Enter>**
kill focused container - **mod+<Shift>+q**
open dmenu - **mod+d**

tile vertically - **mod+v**
tile horizontally - **mod+h**
toggle floating - **mod+<Shift>+Space**
toggle fullscreen - **mod+f**
toggle sticky - **mod+<Shift>+s**
hide/show i3status-bar - **mod+m**

Application Shortcuts

Bmenu (CLI configuration tool) - **mod+Ctrl+b**
Webbrowser Palemoon - **mod+F2**
Filemanager Pcmnfm - **mod+F3**
Root Filemanager - **mod+<Shift>+F3**
Alsamixer (or Pavucontrol if you have installed Pulseaudio) - **mod+<Ctrl>+m**
Musicplayer moc - **mod+F5**
Screenshot of whole screen - **<Print>**
Screenshot of focused container - **mod+<Print>**
Screenshot of selection - **mod+<Shift>+<Print>**
Switch off transparency (kill Compton) - **mod+t**
Switch transparency back on - **mod+<Ctrl>+t**
restart Dunst - **mod+<Shift>+d**
xkill - **mod+<Ctrl>+x**

Navigation

change focus - **mod+arrowkeys** or **mod+j,k,l,ö**
change focus between tiling / floating windows - **mod+space**
move focused container - **mod+<Shift>+arrowkeys** or **mod+<Shift>+j,k,l,ö**
move floating window with the mouse - hold down **mod**

switch to workspace number 1-8 - **mod+1-8**
navigate between workspaces - **mod+<Ctrl>+<Right>/<Left>**
send focused container to workspace number 1-8 - **mod+<Ctrl>+1-8**
move to workspace 1-8 with focused container - **mod+<Shift>+1-8**
workspace back-and-forth - **mod+b**
move container to workspace back-and-forth - **mod+<Shift>+b**
resize container - **mod+r** followed by arrowkeys or j,k,l,ö
(exit resize mode with **<Enter>** or **<Esc>**)
resize gaps - **mod+<Shift>+g** followed by **o** (outer gaps) / **i** (inner gaps) and **+** / **-** / **0**
(exit gaps mode with **<Enter>** or **<Esc>**)
move focused container to scratchpad - **mod+<Shift>+-**
show (next) scratchpad window - **mod+-**

Change window behaviour

stacking - **mod+s**
tabbed - **mod+w**
tiling / toggle split - **mod+e**

Change window borders

none - **mod+u**
2 pixels - **mod+y**
normal - **mod+n**

reload the configuration file - **mod+<Shift>+c**
restart i3 in-place - **mod+<Shift>+r** (preserves and reloads your session)

lock screen - **mod+9**
exit session - **mod+0** and select:
(l)ock, (e)xit, (s)uspend, switch_(u)ser, (h)ibernate, (r)eboot, (<Shift>+S)utdown
(cancel with **<Enter>** or **<Esc>**)
or
exit i3 - **mod+<Shift>+e** (logs you out of your Xsession)

!! All i3 settings, can be edited in ~/.i3/config !!

These custom bash aliases (terminal shortcuts) have been included:

- alias **fixit**='sudo rm -f /var/lib/pacman/db.lck'
- alias **update**='yaourt -Syua'
- alias **con**='nano ~/.i3/config'
- alias **comp**='nano .config/compton.conf'
- alias **inst**='sudo pacman -S'
- alias **mirrors**='sudo pacman-mirrors -g'
- alias **printer**='system-config-printer'

HAVE FUN ! 8^}
